

Quiz on PL/SQL Constants

1. What are constants in PL/SQL?

- A. Variables that can change
- B. Fixed values that do not change**
- C. Data types
- D. None of the above

Answer (B): Fixed values that do not change

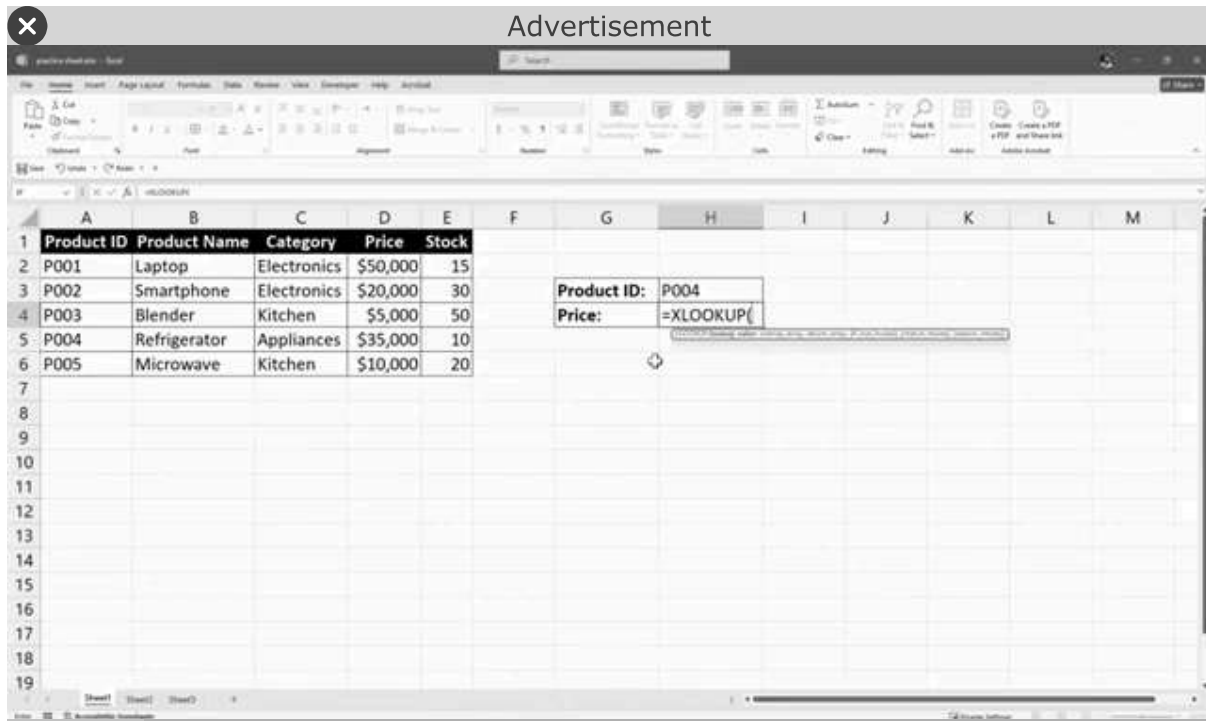

Constants are fixed values that do not change during the execution of a program.

2. Which of the following is NOT a type of constant in PL/SQL?

- A. Numeric Constants
- B. Character Constants
- C. Boolean Constants
- D. Array Constants**

Answer (D): Array Constants

PL/SQL supports numeric, character, and boolean constants but does not support array constants.

3. How do you declare a constant in PL/SQL?

- A. constant_name datatype := value;
- B. constant_name datatype = value;
- C. const constant_name datatype := value;
- D. const constant_name = value;

Answer (A): constant_name datatype := value;

You declare a constant using 'constant_name datatype := value;' syntax.

4. What will happen if you try to change the value of a constant?

- A. It will compile successfully
- B. It will throw an error

C. It will change the value

D. None of the above

Answer (B): It will throw an error

Attempting to change the value of a constant will result in a compilation error.

5. Which of the following is an example of a numeric constant?

A. 'Hello'

B. 3.14

C. TRUE

D. 'A'

You scored 5 out of 5!

Correct Incorrect
