

Quiz on PL/SQL Functions Overview

1. What does PL/SQL stand for?

- A.** Procedural Language/Structured Query Language
- B.** Programming Language/Structured Query Language
- C.** Programming Language/Sequential Query Language
- D.** Procedural Language/Sequential Query Language

Answer (A): Procedural Language/Structured Query Language
PL/SQL stands for Procedural Language/Structured Query Language.

2. Which of the following is a type of PL/SQL function?

- A.** User-defined function
- B.** Built-in function
- C.** Both user-defined and built-in function
- D.** None of the above

Answer (C): Both user-defined and built-in function
PL/SQL supports both user-defined functions and built-in functions.

The screenshot shows an Excel spreadsheet with a table of products and a formula using XLOOKUP.

Product ID	Product Name	Category	Price	Stock
P001	Laptop	Electronics	\$50,000	15
P002	Smartphone	Electronics	\$20,000	30
P003	Blender	Kitchen	\$5,000	50
P004	Refrigerator	Appliances	\$35,000	10
P005	Microwave	Kitchen	\$10,000	20

Below the table, there is a formula bar showing the following formula:

```
Product ID: P004
Price: =XLOOKUP(H3,
```

3. How can a PL/SQL function return a value?

- A. Using 'RETURN' statement
- B. Using 'OUTPUT' parameter
- C. Using 'IN' parameter
- D. Using 'PRINT' statement

Answer (A): Using 'RETURN' statement

A PL/SQL function can return a value using the 'RETURN' statement.

4. What is the purpose of the RETURN keyword in a PL/SQL function?

- A. To end the function
- B. To return a value to the caller
- C. To declare a variable

D. To define the function

Answer (B): To return a value to the caller

The RETURN keyword is used to return a value from the function back to the caller.

5. Which of the following is NOT a characteristic of PL/SQL functions?

A. Can be called from SQL

B. Must return a value

C. Can take parameters

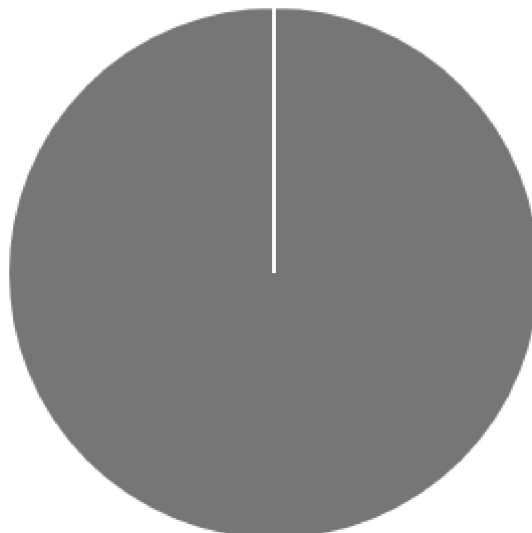

D. Cannot be nested

Answer (D): Cannot be nested

PL/SQL functions can be nested within other functions or blocks.

You scored 5 out of 5!
