

Quiz on PL/SQL Procedures

1. What is a PL/SQL procedure?

- A.** A block of code that performs a specific task
- B.** A type of database
- C.** A programming language
- D.** A SQL command

Answer (A): A block of code that performs a specific task

A PL/SQL procedure is a named block of code that performs a specific task in the Oracle database.

2. How do you define a PL/SQL procedure?

- A.** CREATE PROCEDURE procedure_name
- B.** DEFINE PROCEDURE procedure_name
- C.** BEGIN PROCEDURE procedure_name
- D.** FUNCTION procedure_name

Answer (A): CREATE PROCEDURE procedure_name

To define a PL/SQL procedure, you use the syntax 'CREATE PROCEDURE procedure_name'.

3. Which of the following is NOT a part of a PL/SQL procedure?

- A. Header
- B. Body
- C. Declaration Section
- D. Execution Section

Answer (D): Execution Section

The Execution Section is not a formal part of a PL/SQL procedure; instead, procedures consist of a Header, Body, and an optional Declaration Section.

4. What keyword is used to execute a PL/SQL procedure?

- A. RUN

B. EXECUTE

C. CALL

D. START

Answer (C): CALL

The keyword 'CALL' is used to execute a PL/SQL procedure.

5. Can a PL/SQL procedure return a value?

A. Yes

B. No

C. Only through OUT parameters

D. Only if it is a function

Answer (C): Only through OUT parameters

A PL/SQL procedure cannot return a value directly but can return values through OUT parameters.

You scored 3 out of 5!
