

Quiz on PL/SQL Variable Types

1. What are the two main categories of variable types in PL/SQL?

- A.** Scalar and Composite
- B.** Integer and String
- C.** Local and Global
- D.** Static and Dynamic

Answer (A): Scalar and Composite

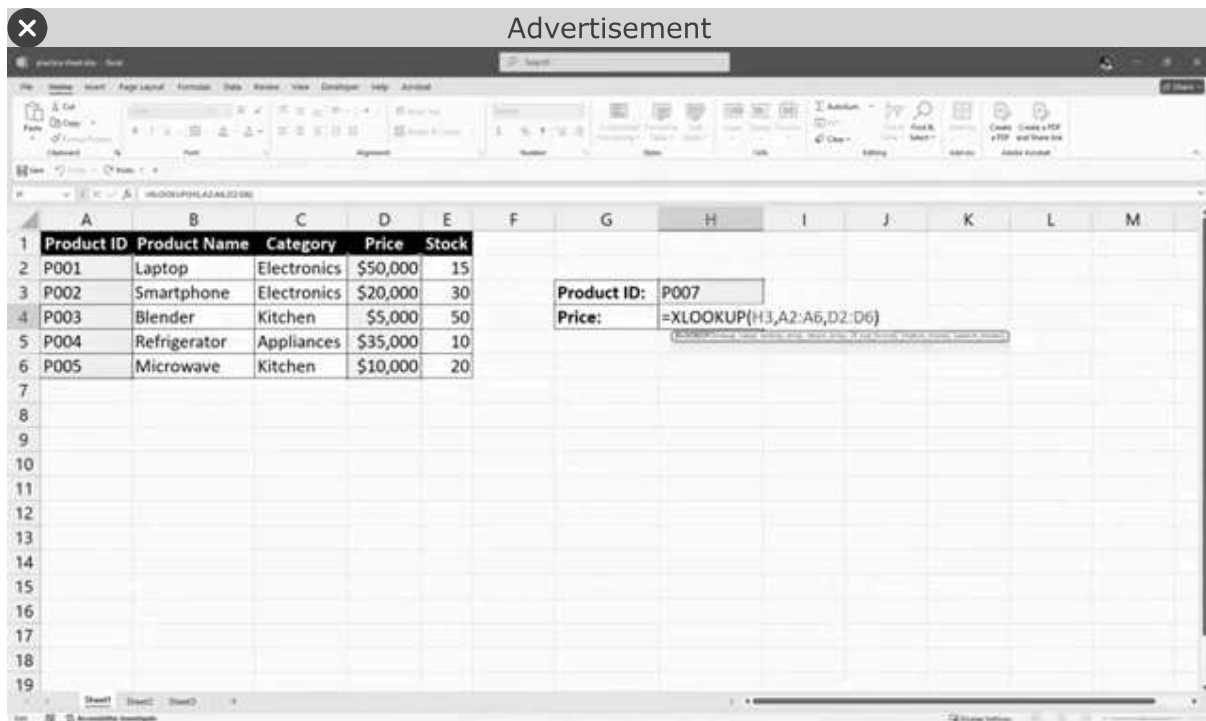

The two main categories of variable types in PL/SQL are Scalar and Composite.

2. Which of the following is NOT a scalar data type in PL/SQL?

- A.** NUMBER
- B.** VARCHAR2
- C.** ARRAY
- D.** BOOLEAN

Answer (C): ARRAY

ARRAY is a composite data type and not a scalar data type in PL/SQL.

3. What is the maximum length of a VARCHAR2 variable in PL/SQL?

- A. 255 bytes
- B. 4000 bytes
- C. 32767 bytes
- D. Unlimited

Answer (B): 4000 bytes

The maximum length of a VARCHAR2 variable in PL/SQL can be up to 4000 bytes.

4. Which PL/SQL data type can store a value of any data type?

- A. BLOB

B. CLOB

C. ANYDATA

D. XMLTYPE

✓ **Correct! Well done.**

Answer (C): ANYDATA

ANYDATA is a PL/SQL data type that can store a value of any data type.

5. What is the primary purpose of using composite data types in PL/SQL?

A. To store single values

B. To store multiple values

C. To improve performance

D. To manage memory

Answer (B): To store multiple values

Composite data types are used to store multiple values as a single unit.
